Ah OK, citrus in TX and FL. High use rate of 33 lbs or 4.95 lbs ai/A.

We haven't written up anything for eco yet. We briefed the OPP IO on this about a month or two ago. At some point, we will probably have to at least write something up - like a 1 pager - but since the use is no higher than previous uses, for eco we will be pointing back to the previous risk assessments (the DRA).

Did we do citrus already or was that the one that they did not know if we had to do?

This is for a check-in on the new use for citrus that we have been working on since last winter. As usual it is really to discuss the human health dietary assessment and DW.
